

Automatic Croquettes Forming Machine

Pneumatic tabletop machine is used to produce croquettes and meatballs of different weights.

This machine can be connected to any filler (Vacuum Filler or Hydraulic Filler) which is required and can't produce croquettes without it.

It produces between 10,000 croquettes and 7,000 meatballs per hour.

Can be connected to a batter-breading machine in a production line to get breading on croquettes or meatballs which is recommended.

See image below of complete production line:
